

Royal College of Physicians of Edinburgh

EXAMINATION FOR MEMBERSHIP

JULY 1931

BACTERIOLOGY

1. Give a succinct account of the phenomenon of agglutination and discuss its practical applications.
2. Discuss the various factors involved in the production of puerperal sepsis, giving an account of current views on this subject.
3. Give a general account of the characters of the dysentery bacilli, stating their distribution in the body and discussing their relation to lesions.
4. Give an account of recent work on the aetiology of disseminated sclerosis. To what extent has proof been brought that this condition is due to a micro-organism?
