

Royal College of Physicians of Edinburgh

EXAMINATION FOR MEMBERSHIP

JULY 1925

CARDIOLOGY

1. Describe the various forms of heart block and explain how the diagnosis of each form mentioned may be made.
2. How may angina pectoris be produced? Discuss its appropriate treatment.
3. Give a brief account of tachycardia and describe in particular auricular flutter.
4. How can an adherent pericardium be diagnosed? To what symptoms may the condition give rise and describe possible treatment?
