### DERMATOLOGY

1. *Dermatitis herpetiformis*.—Describe the eruption in an adult, and contrast it with that found in a child. Discuss its relationship with various forms of pemphigus.
2. Give the distribution and appearances of the eruption in *rosacea*. Discuss its aetiology and treatment.
3. Describe a typical case of *lichen planus*. What course does it run, and how would you treat it?
4. Describe the different forms of *sarcoids*. Discuss their relationship to the tuberculides and syphilides.
