## EXAMINATION FOR MEMBERSHIP.

*9th and 10th JULY 1901.*

---

### DISEASES OF THE BLOOD.

1. Describe the naked eye appearances which you would expect to find in the body of a patient who had died of Pernicious Anæmia, and discuss the pathology of the disease.

2. Discuss the differential diagnosis of the spleno-medullary and lymphatic forms of Leukæmia.

3. Enumerate the diseases in which the microscopic examination of the blood is of distinct diagnostic value, indicating the characteristics of the blood which are of special diagnostic importance in each disease.

4. What treatment would you advise in—

(a) Chlorosis.

(b) Pernicious Anæmia.

(c) Lymphatic Leukæmia.
