

Royal College of Physicians of Edinburgh

EXAMINATION FOR MEMBERSHIP

OCTOBER 1919

DISEASES OF THE BLOOD

1. Discuss the etiology and pathology of leukaemia. Describe the variations in the blood and clinical picture in the different types of the disease. Indicate the general lines of treatment.
2. Describe in detail any one method of performing transfusion of blood. Name other methods, and indicate what precautions you would take to ascertain the suitability of any donor for transfusion.
3. Describe the development of red corpuscles, and discuss the bearing of this on the blood pictures of chlorosis, haemorrhagic anaemia, and pernicious anaemia.
4. What is leucopenia? Enumerate the more important diseases and conditions in which it does or may occur, and discuss its causation.
