### NEUROLOGY

1. What are the causes and symptoms of Haematomyelia, and how can it be clinically distinguished from Myelitis and from Meningeal Haemorrhage?

2. Discuss the principal views which have been put forward to explain the occurrence of the Argyll Robertson pupil phenomenon.

3. Discuss the significance of Conjugate Deviation of the Head and Eyes in Intracranial Lesions.

4. Discuss and illustrate the following statement by Professor Janet:—"Hysteria is a form of mental depression characterised by the retraction of the field of personal consciousness, and a tendency to the dissociation and emancipation of the systems of ideas and functions that constitute personality."
