### NEUROLOGY

1. Describe the circulation in the brain and discuss the changes resulting in the formation of miliary aneurism. State your views on "cerebral angiospasm."
2. Lesion of the spinal cord (*e.g.* myelitis or intramedullary tumour). How do you determine its site and vertical extent?
3. Contrast infantile paralysis and infantile hemiplegia as regards diagnosis, prognosis and treatment.
4. How would you arrive at the conclusion that a patient was suffering from an extra-cerebellar (cerebro-pontine angle) tumour and not from an intra-cerebellar tumour?
