

Royal College of Physicians of Edinburgh

EXAMINATION FOR MEMBERSHIP

APRIL 1919

DISEASES OF CHILDREN

1. What directions would you give to the mother regarding the feeding of a normal baby that had to be weaned at five months, and given a mixture containing cows' milk? If the infant was constipated on the mixture given, what changes might be made to remedy this?
2. Describe the causation and treatment of Prolapse of the Rectum.
3. What conditions cause Jaundice in infants of a few weeks old, and how would you distinguish them from one another?
4. Describe the symptoms, diagnosis, treatment, and prognosis of Orthostatic (cyclic) Albuminuria.
