### DISEASES OF CHILDREN

1. Discuss the etiology and classification of the dyspepsias of infancy. What is protein-milk? Give the indications for its use, and its mode of action.

2. *Splenic anaemia of infants.*—Describe its clinical features, and give the differential diagnosis from other forms of splenic enlargement in infancy and childhood.

3. *Coeliac disease.*—Describe the clinical features, and give the treatment of a case.

4. *Congenital heart-disease.*—Give the common pathological types, and the symptoms and signs. How would you distinguish a case from one of acquired heart-disease?
