EXAMINATION FOR MEMBERSHIP

October 1934

DISEASES OF CHILDREN

1. What additions would you advise to the diet of a baby artificially fed between the ages of six months and two years? What are the common mistakes in dieting during this period, and what diseases result from them?
2. What conditions produce the symptom of chronic cough in children of school age? Describe the pathology, clinical features and differential diagnosis.
3. Describe the conditions—hemiatrophy and hemihypertrophy.
4. Discuss some of the neurotic habits of early childhood.
